

Documentation of Fluxgen Web Application

Name: Udbhav Bisarya

Duration of Internship: 2 months

Work done: Sidebar,Navbar,Settings Page,Contact Us Page, Activity Log Page, More Page(Partial)

Libraries

The following libraries were used for the project:-

1. @material-ui/core
2. @material-ui/icons
3. tachyons
4. react-router-dom
5. material-table
6. @date-io/date-fns

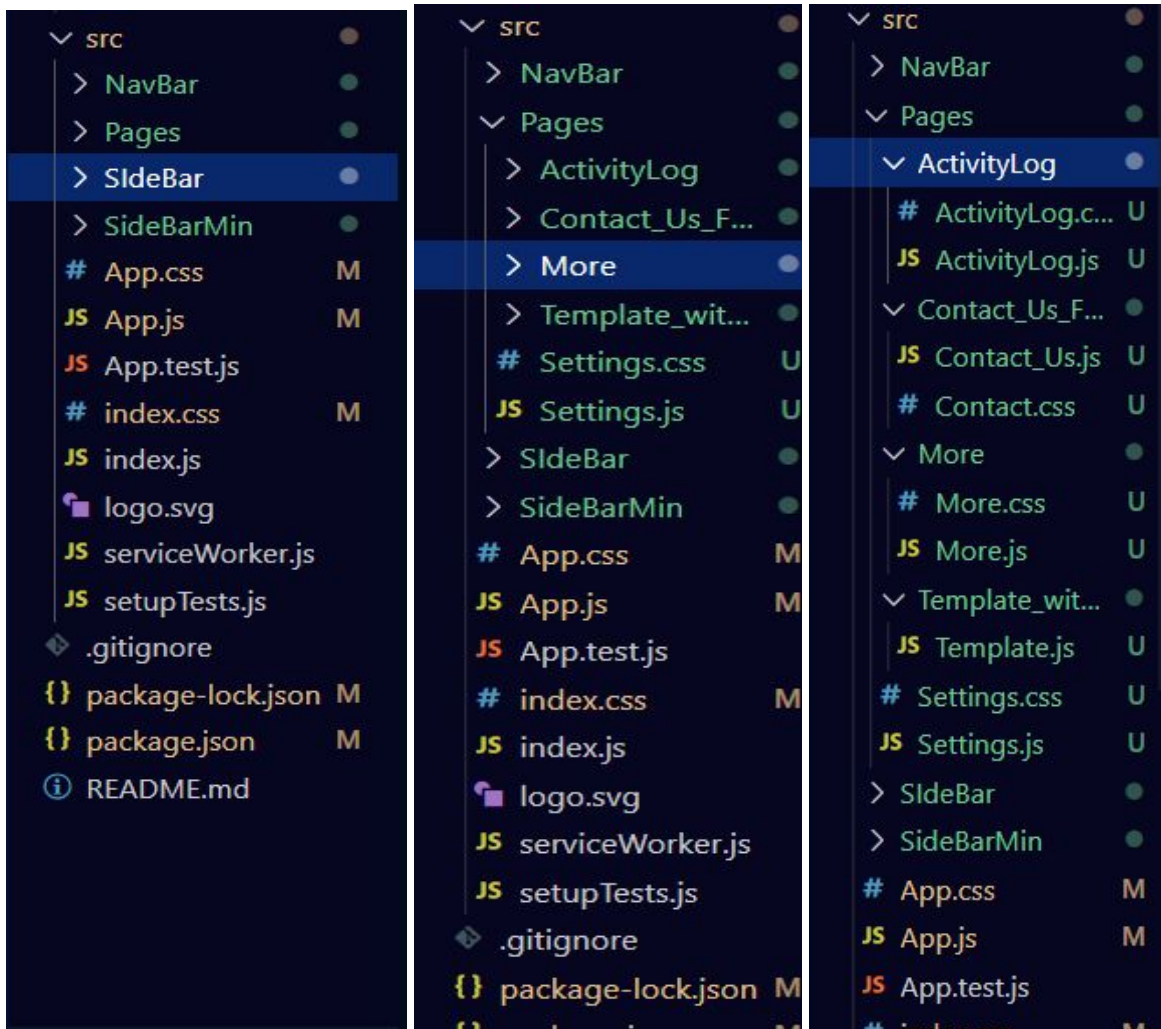

Instructions to run the webapp:

On terminal:

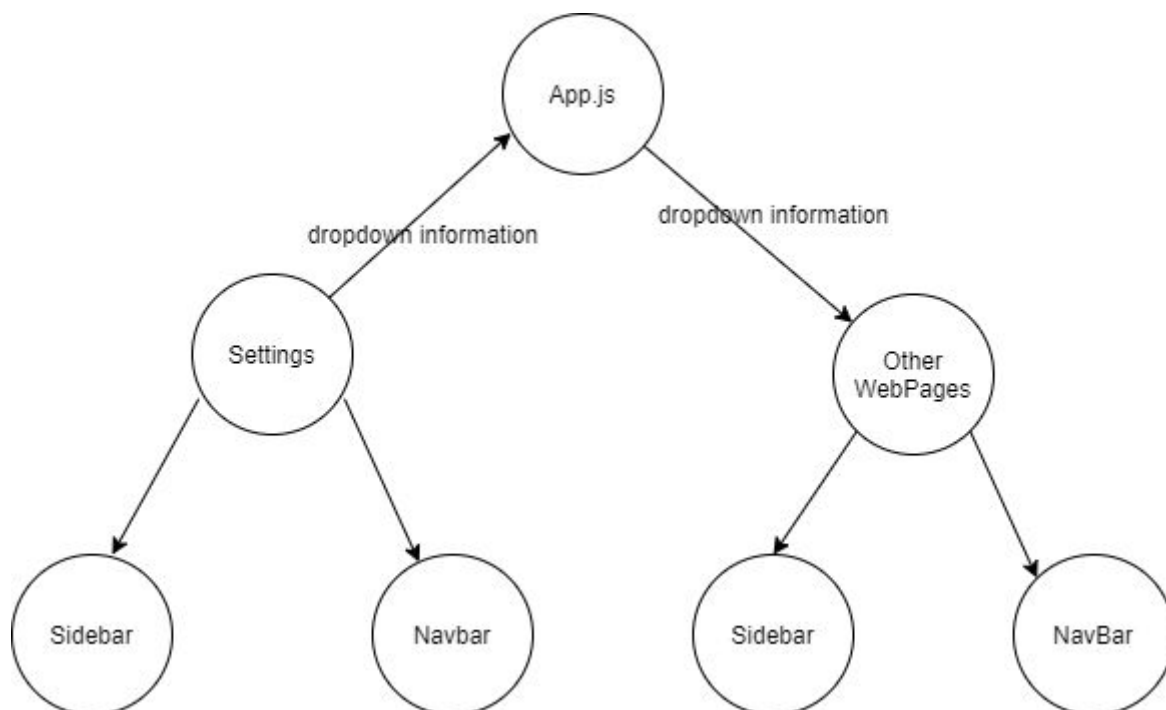

1. cd sidebarimp
2. npm install @material-ui/core --save
3. npm install @material-ui/icons --save
4. npm install tachyons --save
5. npm install react-router-dom --save
6. npm install material-table --save
7. npm install @date-io/date-fns --save
8. npm start

Heirarchy of Folders

1. Main App.js is in src folder. Sidebar,Navbar, Pages and Sidebarmin are the main folders
2. Navbar has main navbar.js, Sidebar has sidebar.js along with weather.js for weather component in sidebar. Similarly for sidebarmin folder
3. Pages has all the pages - Settings, More, Contact Us, Activity Log and Template.js
4. Basic setup of all pages is available in template .js

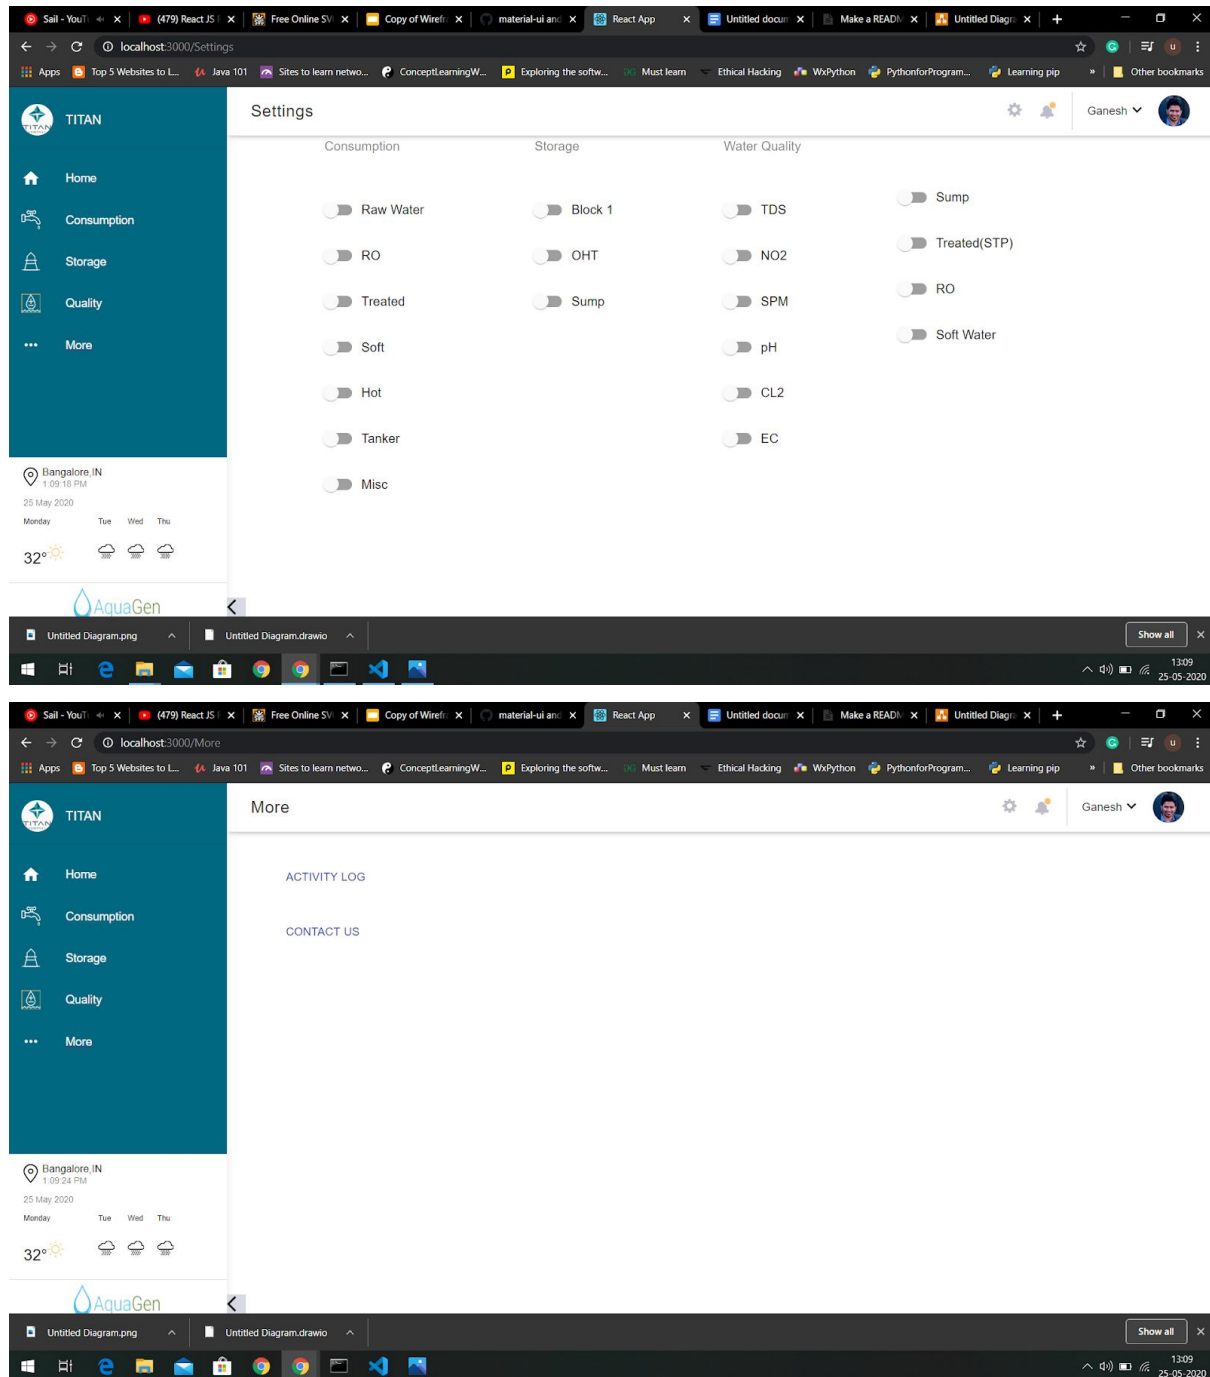

Data flow

Dropdown information is decided in the settings page. This data is sent to the main app.js. App.js sends this data to all the other webpages so that the sidebar and navbar can be rendered very easily at each page
